Tech Assist

1. Project Overview

Project Name: Tech Assist
Description:
Tech Assist is a premium support platform for car owners to get assistance from tech agents regarding their premium cars. It allows users to purchase various support packages (Platinum, Gold, Silver, etc), each offering credits and durations for calls with agents. The platform features three modules: Admin, User, and Agent.

- **Admin Module**: Built using React for frontend, Laravel for backend, and MySQL for database.
- **User & Agent Modules**: Developed with React Native, Laravel, and MySQL.

Target Regions: India, UAE, KSA.

2. Tech Stack

Admin Module

- **Frontend:** React.js
- **Backend:** Laravel
- **Database:** MySQL

User & Agent Modules

- **Frontend (User/Agent):** React Native
- **Backend:** Laravel
- **Database:** MySQL

3. Features

- **User Module:**
    - Registration, login, and package purchase (Platinum, Gold, Silver)
    - Package details with credits and duration
    - Option to contact agents via normal or video call
    - Call history with credit usage and duration
- **Agent Module:**

    - Call management (video and normal calls)
    - Credit allocation and call duration tracking
    - End the call and update credits/payment based on the call duration
- **Admin Module:**
    - Admin login and dashboard
    - Agent management
    - Package management (add, edit, delete packages)
    - View call logs and credits consumed

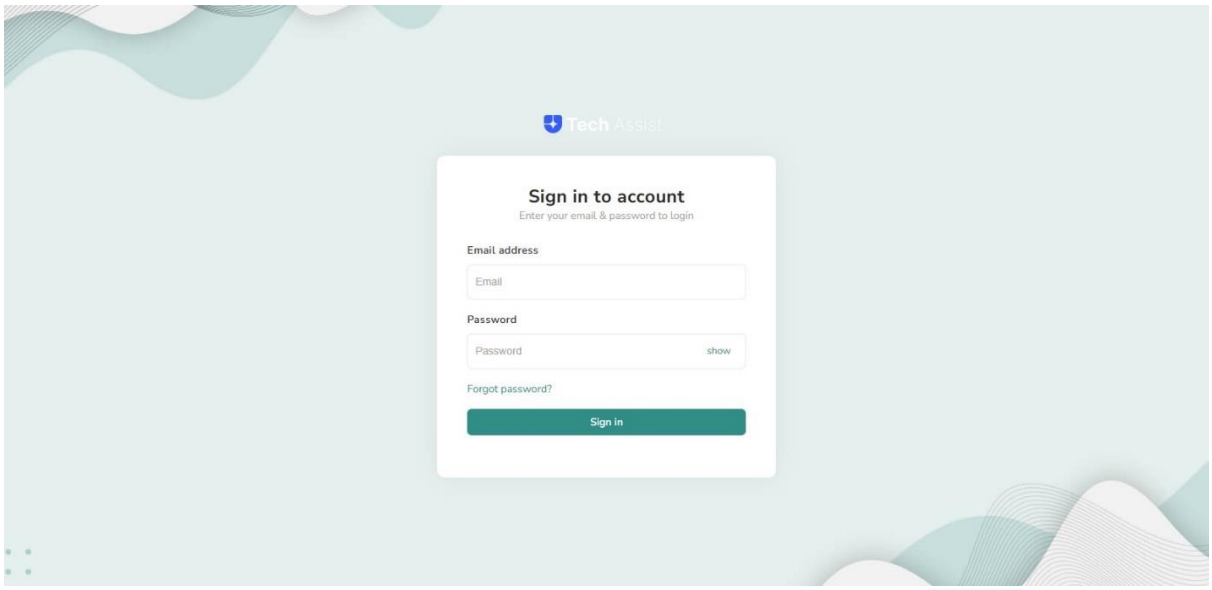
4. Authentication & Security

- **JWT Authentication:** Used for login, ensuring secure access to the platform.
- **Role-based Access Control:** Admin has full access to the platform, while agents and users have limited access based on their roles.

5. Admin Module

Admin Login Screen

Description: The Admin Login screen allows the admin to log in directly without needing to register, ensuring only authorized personnel can access the admin panel. This process uses email and password for authentication.



Key Points

1. **Login Process:**

The admin enters their email and password to log in to the system.

2. **Input Validation:**

   Form validation ensures that both the email and password fields are correctly filled before submission. If any errors occur, they are displayed directly on the screen.

3. **Successful Authentication:**

   Upon successful login, the server responds with an authentication token, which is stored in local Storage for session management. The admin is then redirected to the dashboard.

4. **Error Handling:**

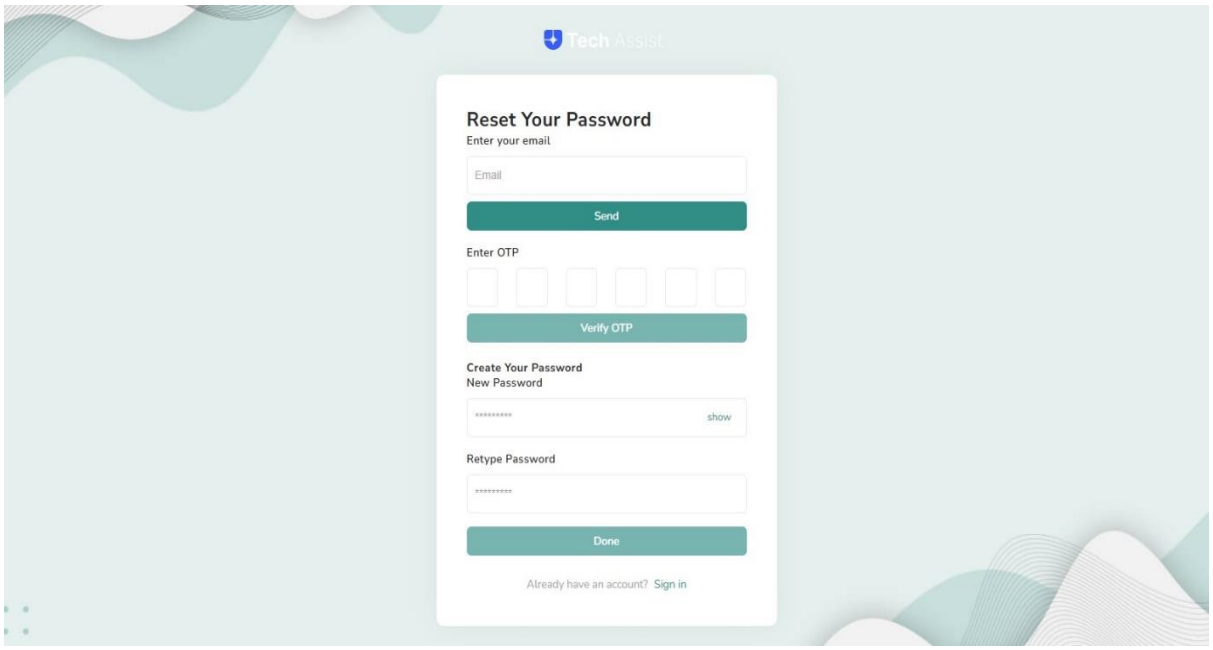
   If the login fails due to incorrect credentials, an error message is shown using toast notifications to alert the admin about the issue.

5. **Forgot Password Option:**

   A Forgot Password link is available on the login screen, allowing admins to initiate the password recovery process and navigate to the password reset page if they forget their credentials.

Forgot Password Screen

Description: The Forgot Password screen allows admins to reset their password if they forget it. The process involves sending an OTP to the admin's registered email, verifying the OTP, and then setting a new password. This ensures secure recovery of the account.



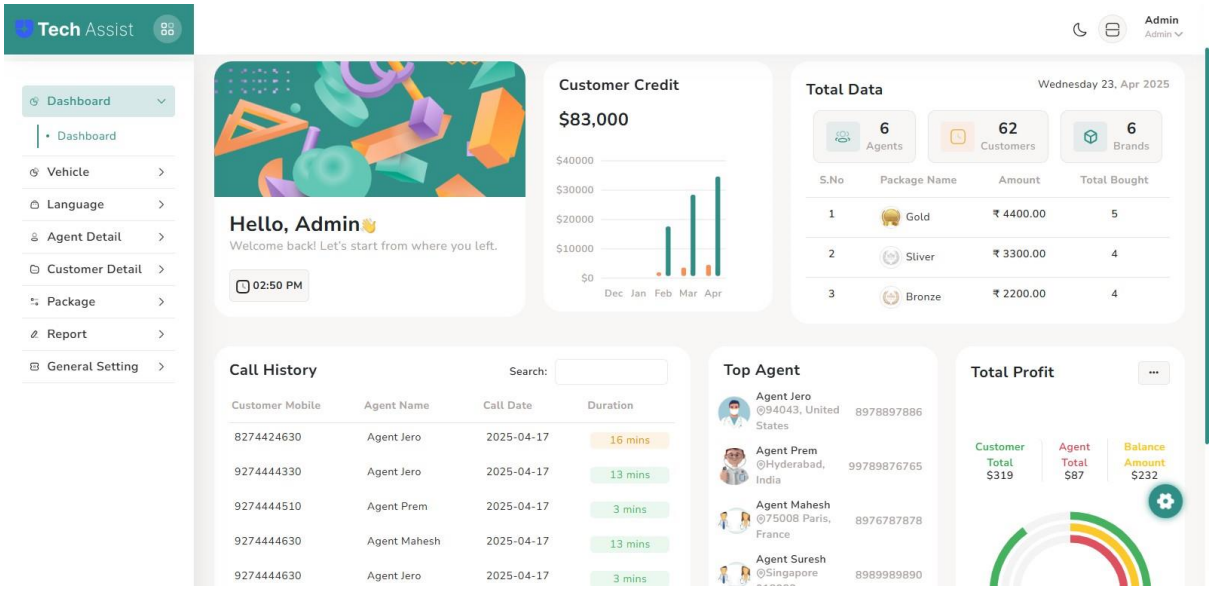
Key Points

1. **Email Entry:**
   The admin enters their registered email to start the password recovery process.
2. **Sending OTP:**
   An OTP is sent to the admin's email, and a success message appears once sent.
3. **OTP Input:**
   The admin enters the 6-digit OTP in split fields for easy input.
4. **OTP Verification:**
   The OTP is verified with the backend, and a success or failure message is shown.
5. **Password Reset:**
   After OTP verification, the admin sets a new password and confirms it.
6. **Error Handling:**
   Errors like invalid OTP or mismatched passwords are displayed via toast notifications.
7. **Completion:**
   Upon successful password reset, the admin is redirected to the login page.

Admin Dashboard Screen

Description:

The Admin Dashboard provides a comprehensive and interactive overview of key metrics, performance indicators, and trends for better decision-making and system management. It is designed to empower admins with quick access to important data and insights, facilitating efficient monitoring and management of customer, agent, and brand activities.



Key Points

1. **Welcome Admin:**

A personalized greeting message for the admin upon login.

2. **Credit Trends: Customer & Agent Analysis (Past 5 Months):**

   A dynamic bar graph showcasing the credit history for customers and agents over the last five months, offering insights into payment trends and account balances.

3. **User & Package Insights: Total Agents, Brands, and Customers with Top 3 Packages:**

   A section that displays key user metrics, such as the total count of agents, brands, and customers, along with a ranking of the top 3 most purchased packages.

4. **Call History:**

   A detailed view of recent customer-agent interactions, providing valuable insights into call volumes and agent performance.

5. **Top Performing Agents:**

   Displays a list or ranking of top agents based on performance metrics, highlighting their achievements and contributions.

6. **Financial Overview: Distribution of Customers, Agents, and Balance Amount:**

   A pie chart that visually breaks down the distribution of customers, agents, and balance amounts, with data segmented into weekly, monthly, and yearly intervals.

Brand Screen

Description:

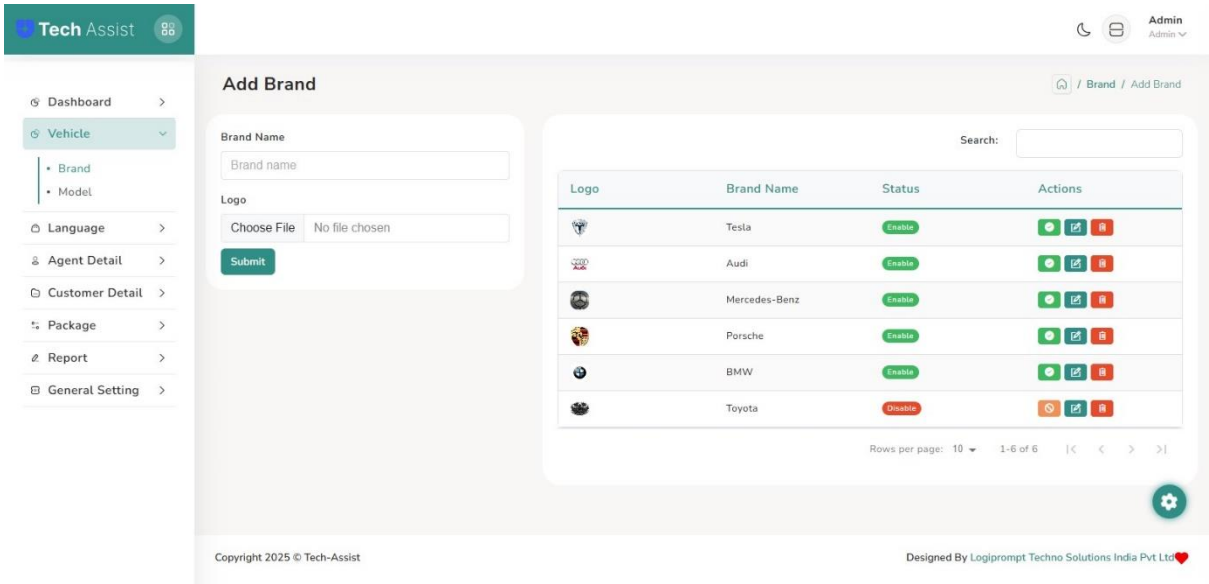
The Brand Management Screen provides comprehensive controls for managing brand details, including the ability to add, edit, view, enable/disable, and delete brands. This functionality is split into two distinct sections for ease of use and better organization, ensuring smooth management of brand data.

Key Features:

Add Brand Screen:

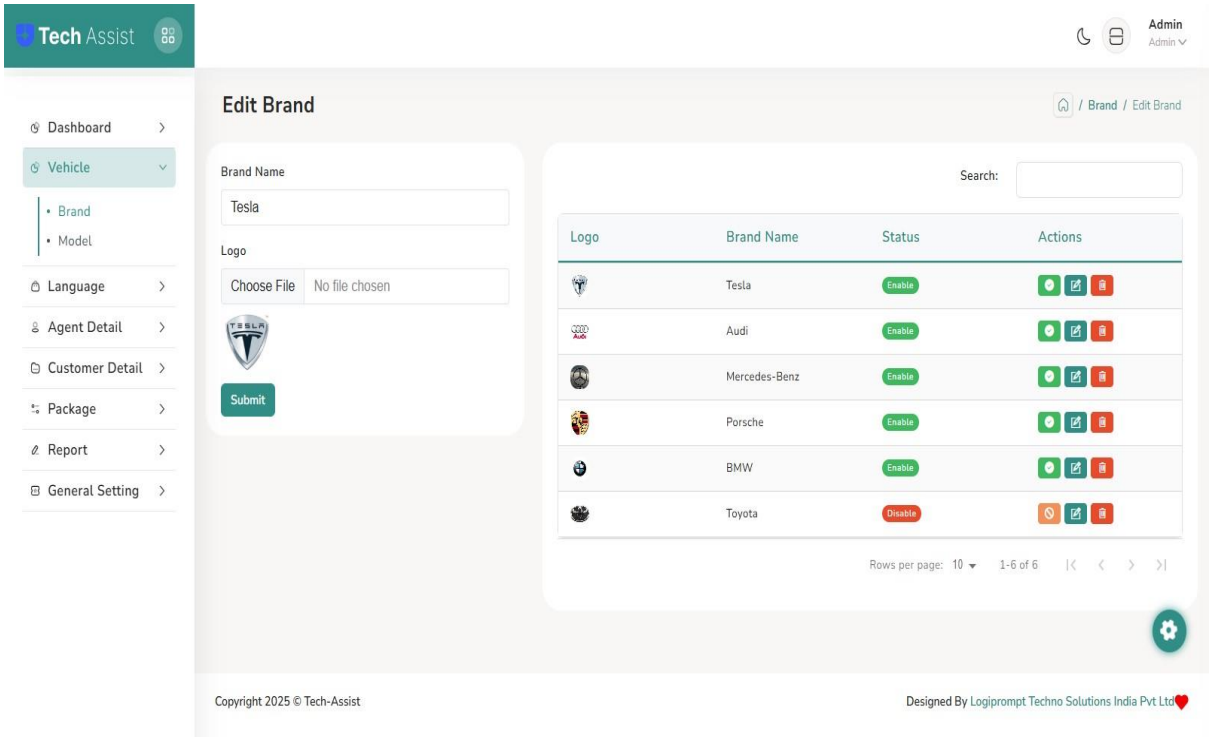
1. **Add New Brand**: Admins can add new brands by providing essential details, including uploading a brand logo and entering a brand name.
2. **View Brand**: A list of all brands with detailed information (e.g., logo, name).

3. **Enable/Disable**: Brands can be toggled between enabled and disabled states, allowing admins to manage visibility or availability.
4. **Delete**: Admins can remove a brand from the system entirely.



Edit Brand Screen:

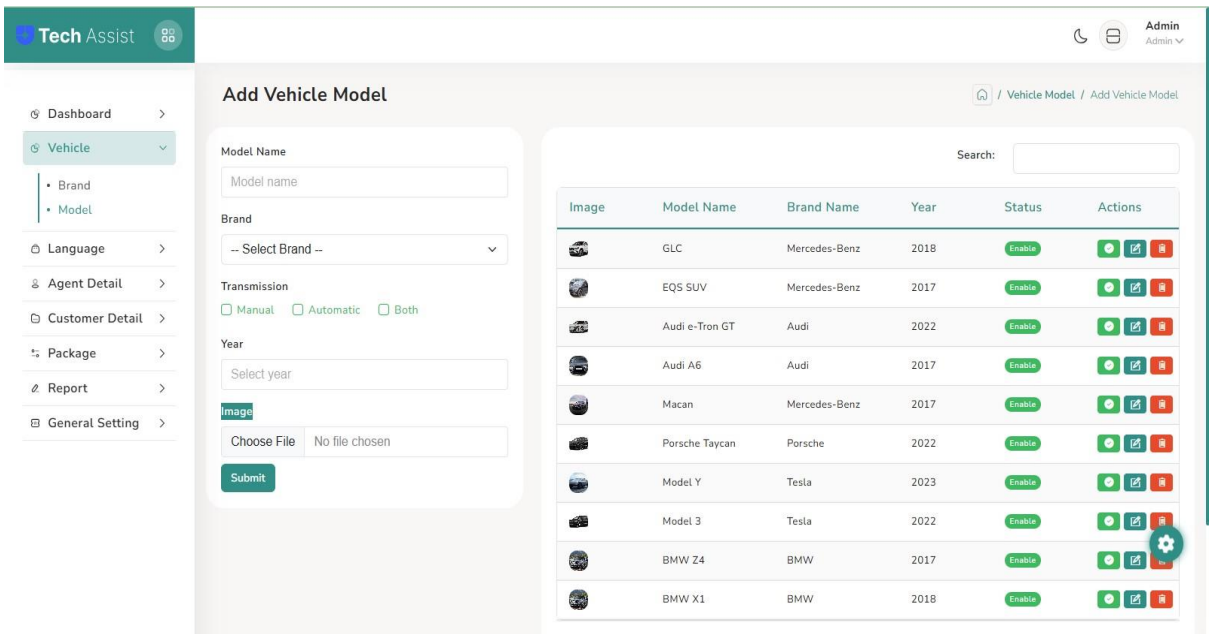
1. **Edit Existing Brand**: Admins can modify the details of existing brands, including updating logos and brand names.
2. **View Brand**: Similar to the add screen, it shows a detailed view of the selected brand.
3. **Enable/Disable**: Brands can be enabled or disabled, as needed.
4. **Delete**: Admins have the option to delete brands if no longer needed.



Vehicle Model Screen

Description:

The Vehicle Model Screen provides a user-friendly interface to manage vehicle models with options to add, edit, delete, enable/disable, and view vehicle model details. This functionality is organized into two screens, ensuring smooth and clear management of vehicle models.



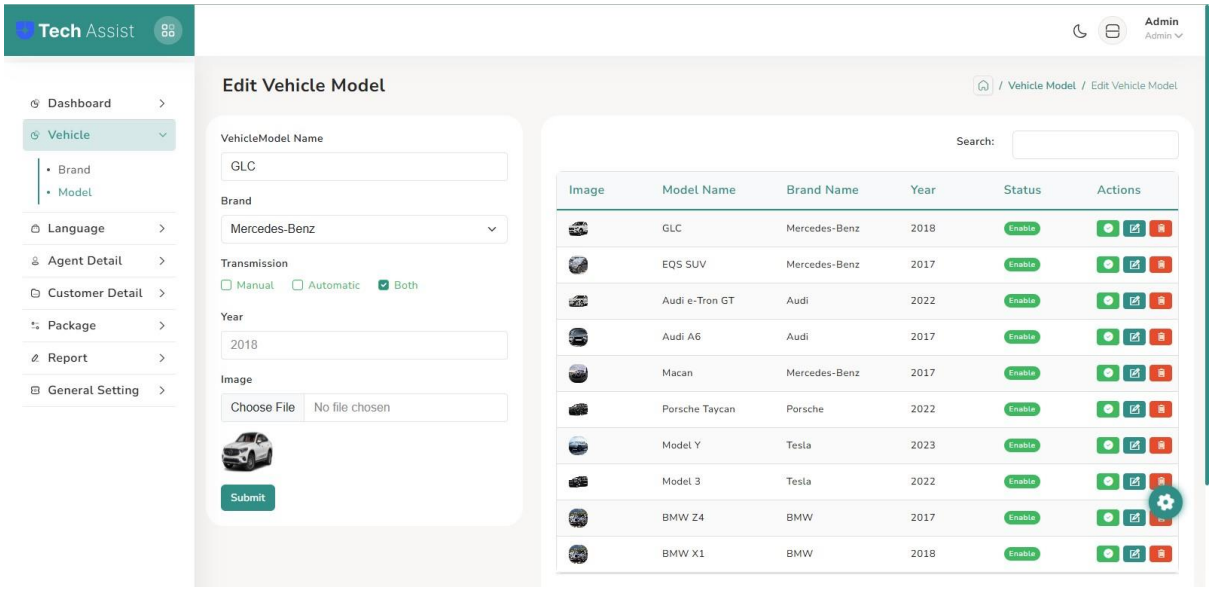
Key Features:

Add Vehicle Model Screen:

1. **Add New Model**: Admins can add new vehicle models by entering key details, including Model Name, Brand Selection, Transmission Mode, Model Year, Image.
2. **View Model**: Displays a list of all vehicle models with details such as name, brand, transmission mode, year, and image.
3. **Enable/Disable**: Allows admins to toggle the model's visibility or availability, ensuring only active models are shown.
4. **Delete**: Admins can delete a model from the system when it is no longer needed.

Edit Vehicle Model Screen:

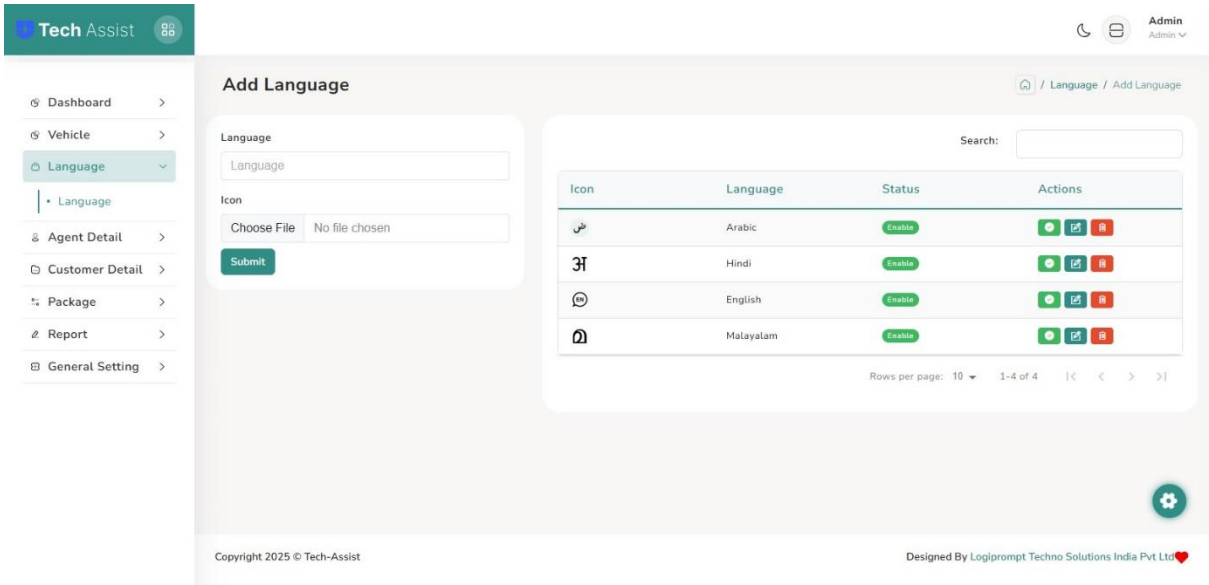
1. **Edit Existing Model**: Admins can modify the details of existing vehicle models, including model name, brand, transmission type, year, and image.
2. **View Model**: Displays the selected model's information in a readable format.
3. **Enable/Disable**: Admins can enable or disable the model as needed.
4. **Delete**: Provides the option to remove models from the system.



Language Screen

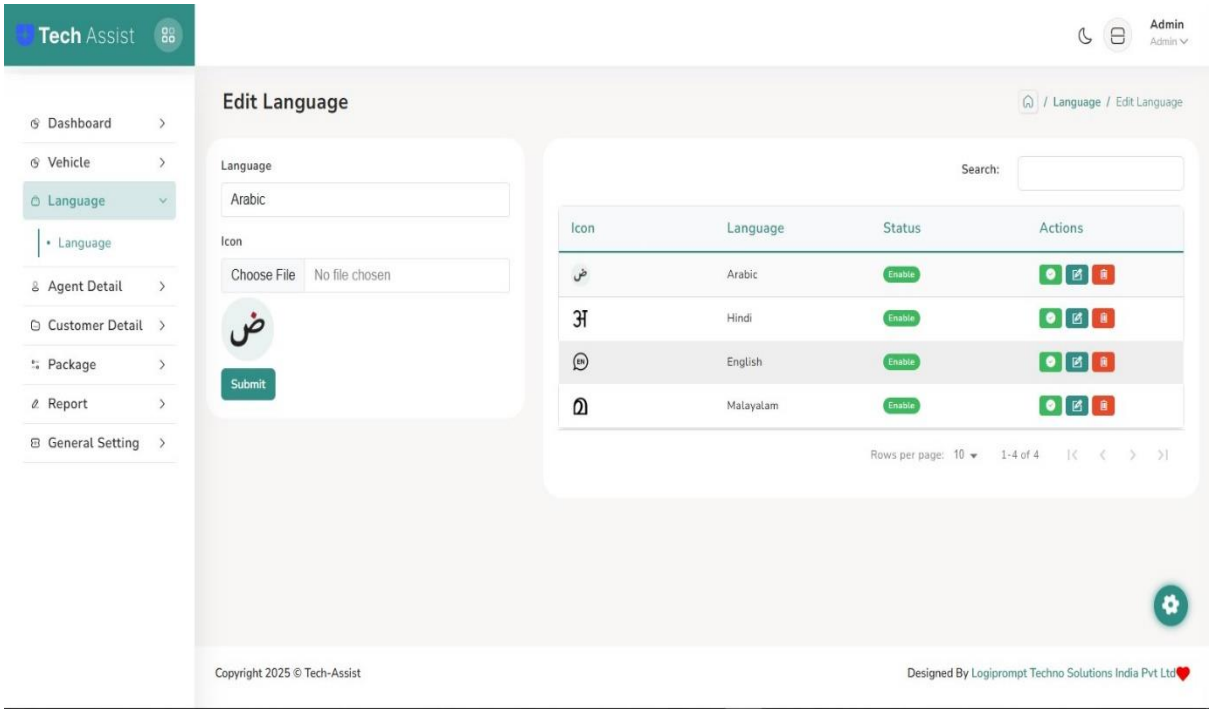
Description:

The Language Screen provides a streamlined interface for managing the languages supported in the system. Admins can easily add, edit, delete, enable/disable, and view language entries, with each entry including a language name and icon for better visual identification.



Add Language Screen:

1. **Add New Language**: Admins can add a new language by entering language and icon.
2. **View Language List**: Displays all added languages with their icons and names.
3. **Enable/Disable**: Allows toggling the availability of the language within the system.
4. **Delete**: Option to remove a language from the list permanently.



Edit Language Screen:

1. **Edit Existing Language**: Enables admins to update the name or icon of a language.
2. **View Language Details**: Shows the selected language's current information.

3. **Enable/Disable**: Admins can control language availability.
4. **Delete**: Admins can remove the language when it's no longer needed.

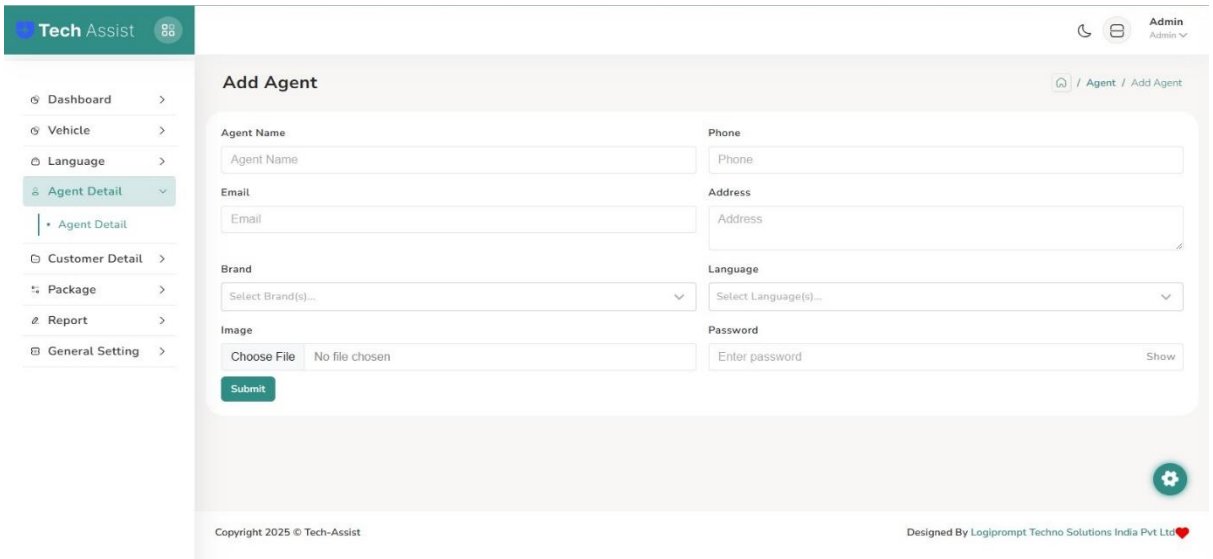
Agent Screen

Description:

The Agent Management Module allows admins to efficiently handle all operations related to agents, including adding, editing, viewing status, managing activity, and monitoring call history. It is divided into four key screens for improved usability and streamlined workflow.

Add Agent Screen:

1. The Add Agent screen is designed to facilitate the onboarding of new agents into the system.
2. It allows admins to input essential information such as the agent's name, mobile number, address, and email ID.
3. Additionally, admins can upload an image of the agent and select multiple languages and brands associated with the agent, offering flexibility in multilingual and multi-brand environments.
4. Once all the required details are filled in, the admin can submit the form to successfully create a new agent profile.

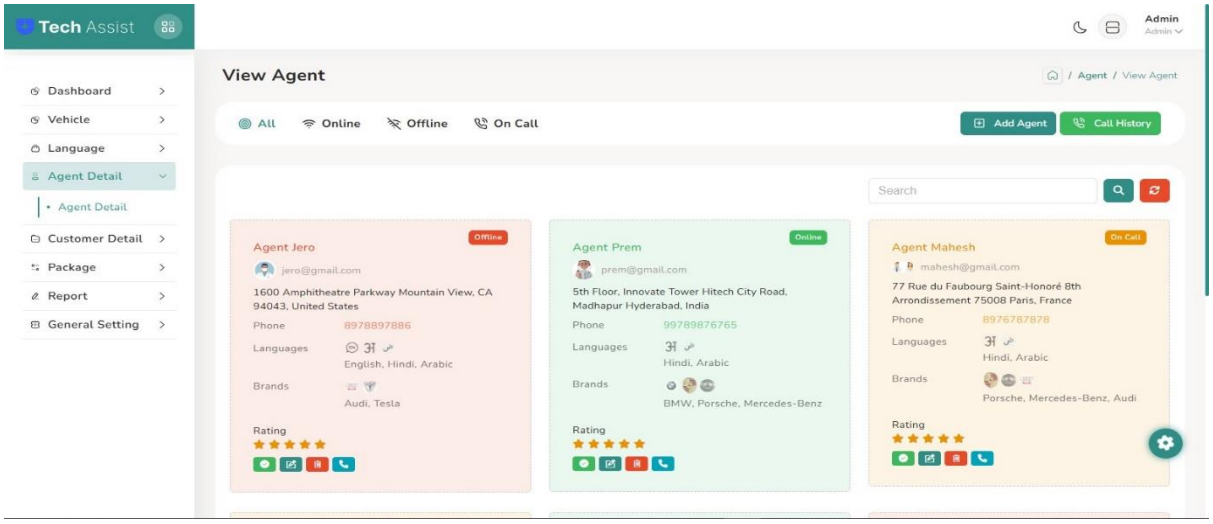


View Agents Screen

The View Agents screen offers a well-organized tabbed interface that categorizes agents based on their real-time status for easier navigation and monitoring:

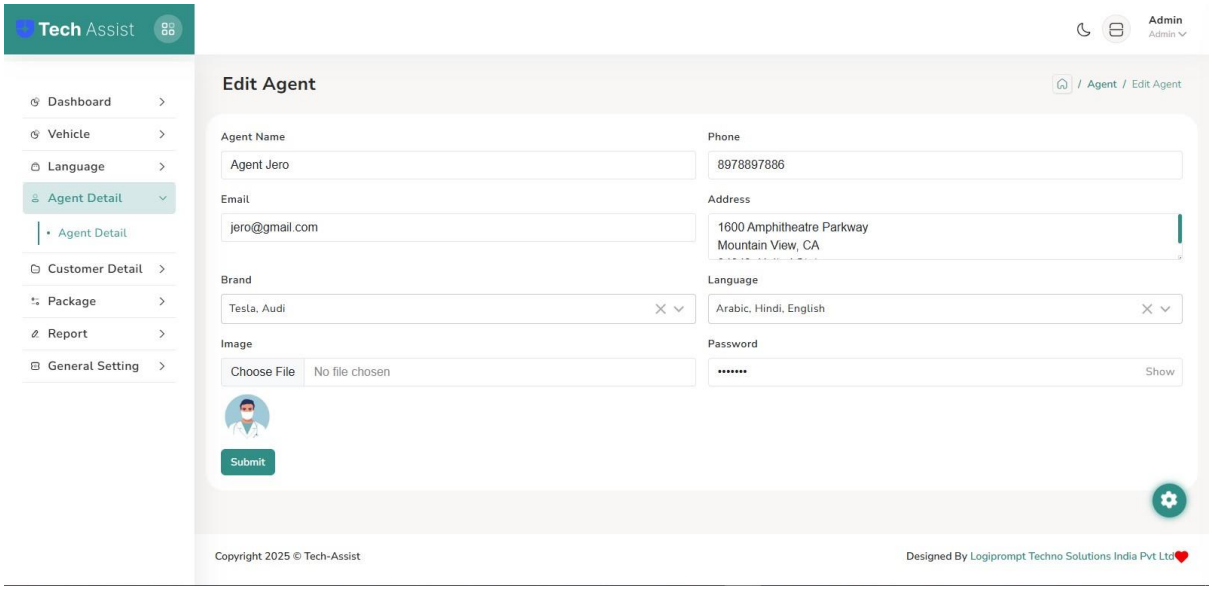
1. **All Agents**: Lists every agent registered in the system.
2. **Online Agents**: Displays agents who are currently active and available.

3. **Offline Agents**: Shows agents who are currently not logged into the system.
4. **On-Call Agents**: Highlights agents who are presently engaged in a call.
5. **Enable/Disable**: Allows toggling the availability of the agent within the system.
6. **Delete**: Option to remove a agent from the list permanently.
7. **Access call history:** To view each agent's communication logs directly from this screen.

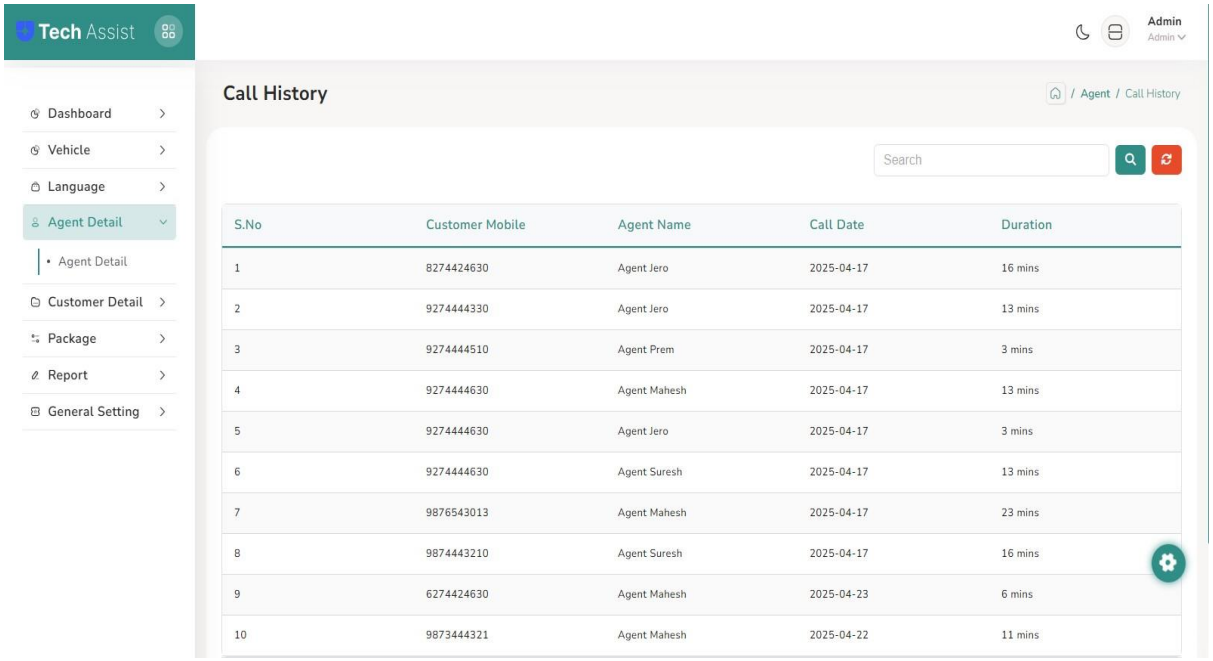


Edit Agent Screen

1. The Edit Agent screen enables administrators to manage and update existing agent profiles with ease.
2. Admins can revise personal details such as name, mobile number, address, and email, as well as adjust the agent's language preferences and brand associations.
3. Additionally, the agent's profile image can be replaced or updated.
4. This screen mirrors the Add Agent form, providing full flexibility to keep agent information accurate and up to date.



Agent Call History Screen



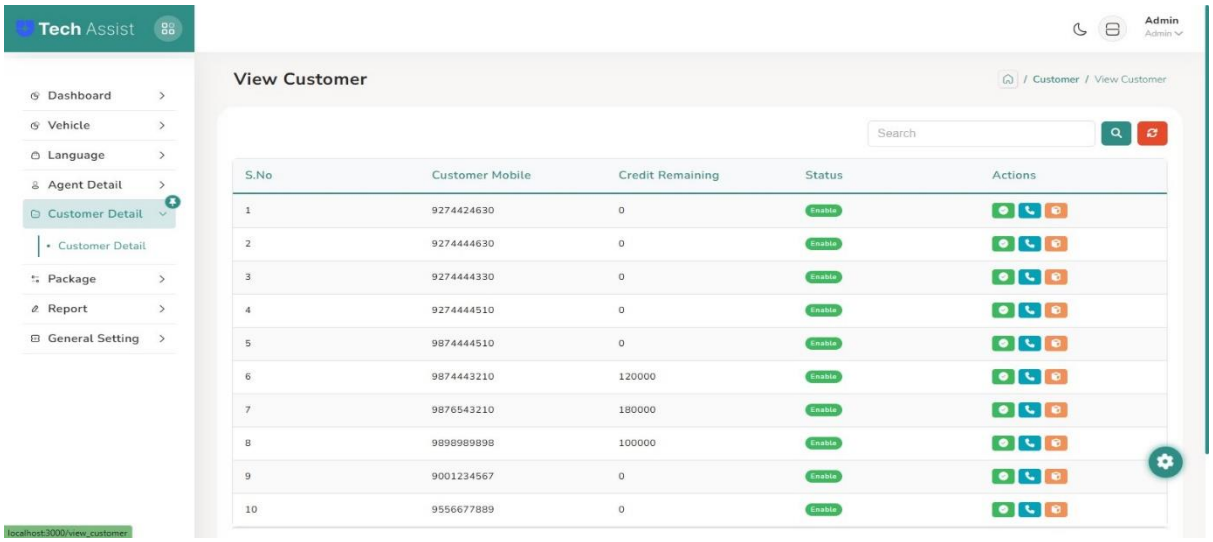
S.No	Customer Mobile	Agent Name	Call Date	Duration
1	8274424630	Agent Jero	2025-04-17	16 mins
2	9274444330	Agent Jero	2025-04-17	13 mins
3	9274444510	Agent Prem	2025-04-17	3 mins
4	9274444630	Agent Mahesh	2025-04-17	13 mins
5	9274444630	Agent Jero	2025-04-17	3 mins
6	9274444630	Agent Suresh	2025-04-17	13 mins
7	9876543013	Agent Mahesh	2025-04-17	23 mins
8	9874443210	Agent Suresh	2025-04-17	16 mins
9	6274424630	Agent Mahesh	2025-04-23	6 mins
10	9873444321	Agent Mahesh	2025-04-22	11 mins

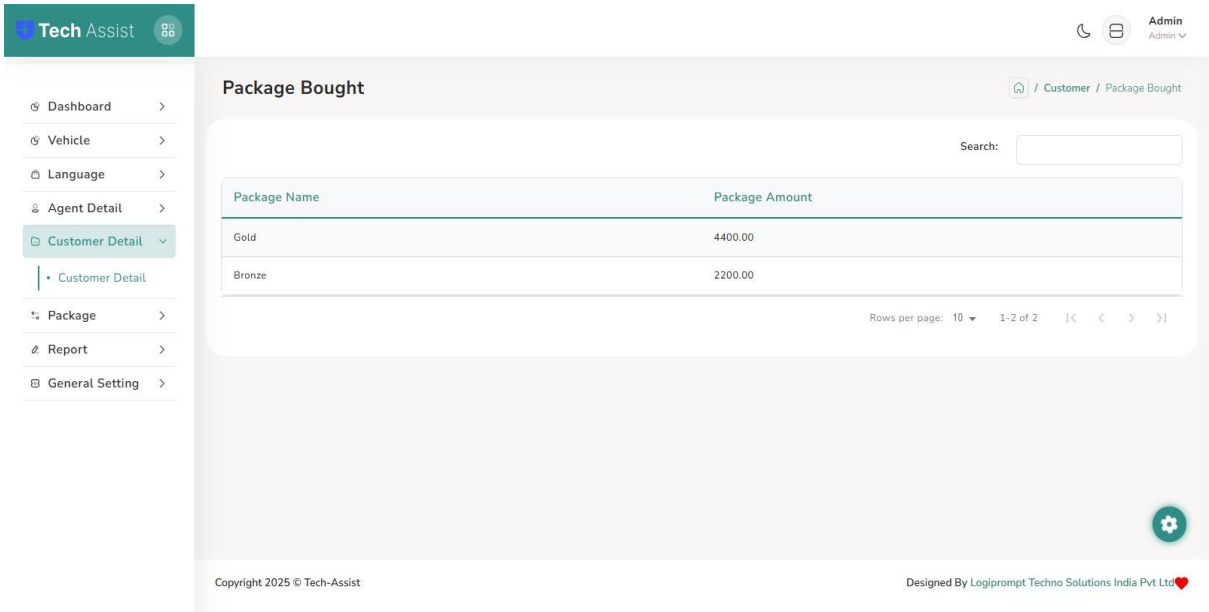
1. This screen offers a comprehensive overview of all calls managed by agents. It includes key details such as the agent's name, the customer's contact number, the date of each call, and its duration.
2. By presenting this data clearly, the screen supports performance tracking, ensures operational transparency, and helps identify agents who consistently handle high volumes of calls or demonstrate strong engagement.

Customer Details Screen

Description:

This screen provides a complete overview of individual customers. Admins can view the customer's mobile number, check their remaining credit balance, and enable or disable their account as needed. The screen also allows access to the customer's call history for tracking interactions and provides a detailed list of packages purchased by the customer, including each package name and its corresponding amount. This centralized view ensures efficient customer management and transparency in service usage.





Package Payment Settings Screen

Description:

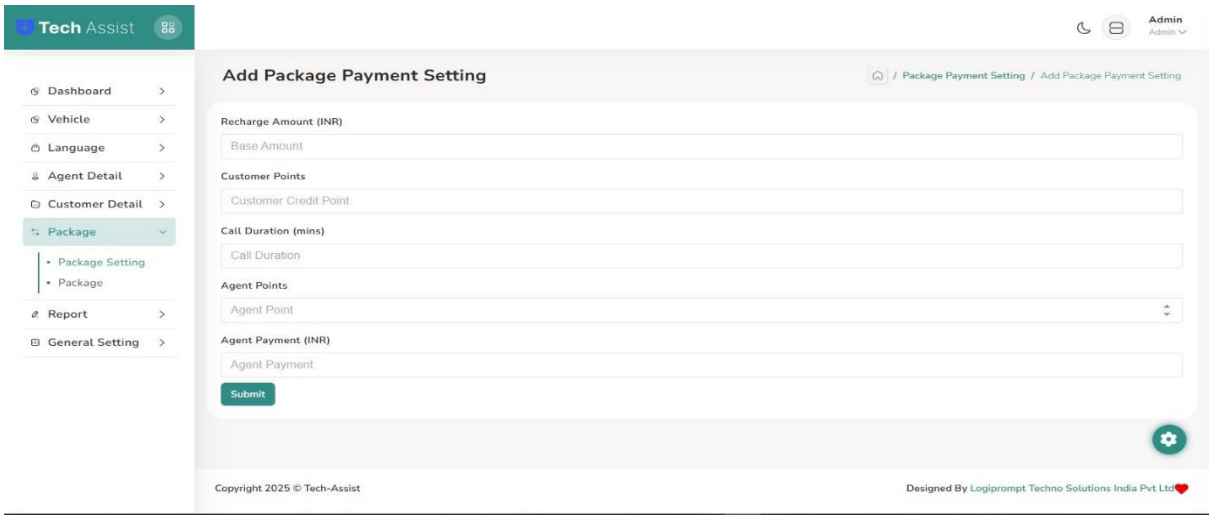
Package Payment Settings Screen serves as the core for configuring and managing package-related payment settings, including credit points, call durations, agent credits, and payments. Admins can adjust various financial parameters that affect the overall package calculations for customers and agents.

Key Fields:

1. **Base Amount**: Defines the base cost of the package.
2. **Base Customer Credit Point**: Sets the credit points for customers based on the package.
3. **Base Call Duration**: Specifies the call duration linked to the package.
4. **Base Agent Point**: Defines the points awarded to agents for the package.
5. **Base Agent Payment**: The payment amount an agent receives for selling or managing the package.

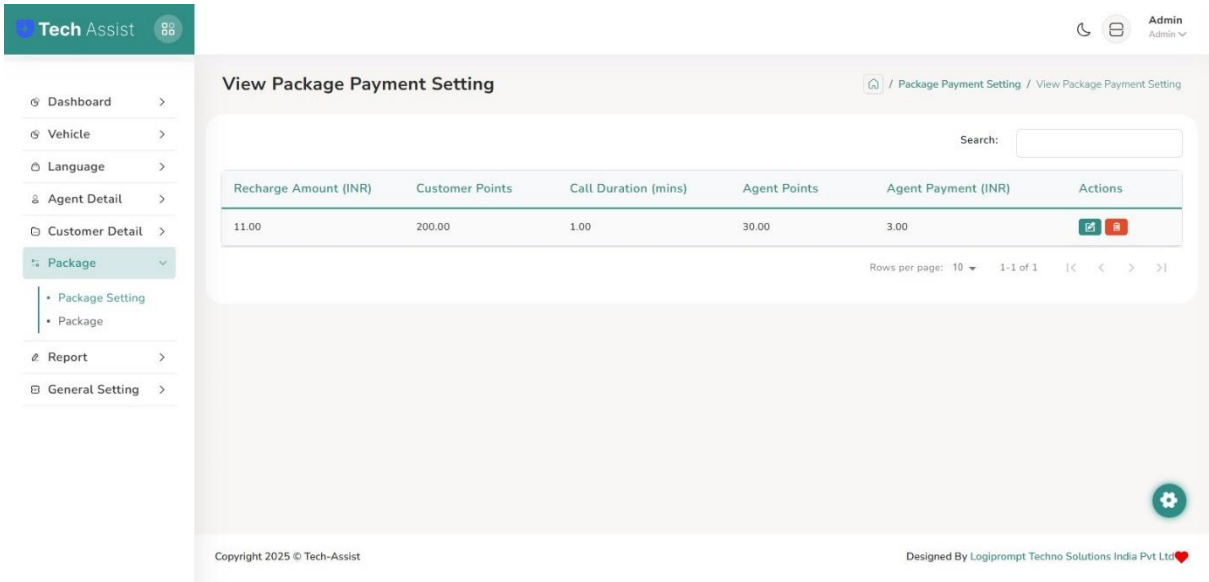
Add Package Payment Settings Screen:

Add Screen allows admin to configure and add new package payment settings, including Base Amount, Customer Credit Point, Call Duration, Agent Point, and Agent Payment.



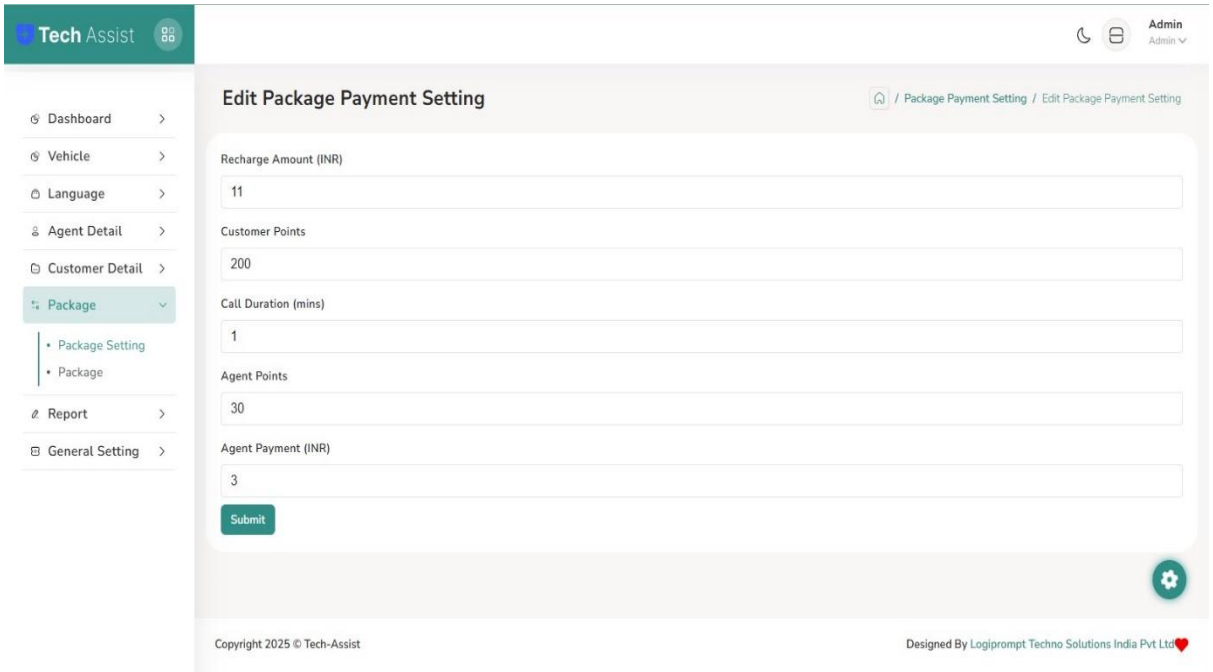
View Package Payment Settings Screen:

1. The View Screen displays existing package payment settings in a structured table format.
2. Admins can delete any existing package payment setting when necessary.
3. Additionally, the screen includes an "Add" button that appears only when no package payment setting exists. It is hidden if a setting is present, ensuring only one active configuration at a time. Once the existing setting is deleted, the button reappears for adding a new one.



Edit Package Payment Settings Screen:

Edit Screen enables admin to modify the package payment settings as required.



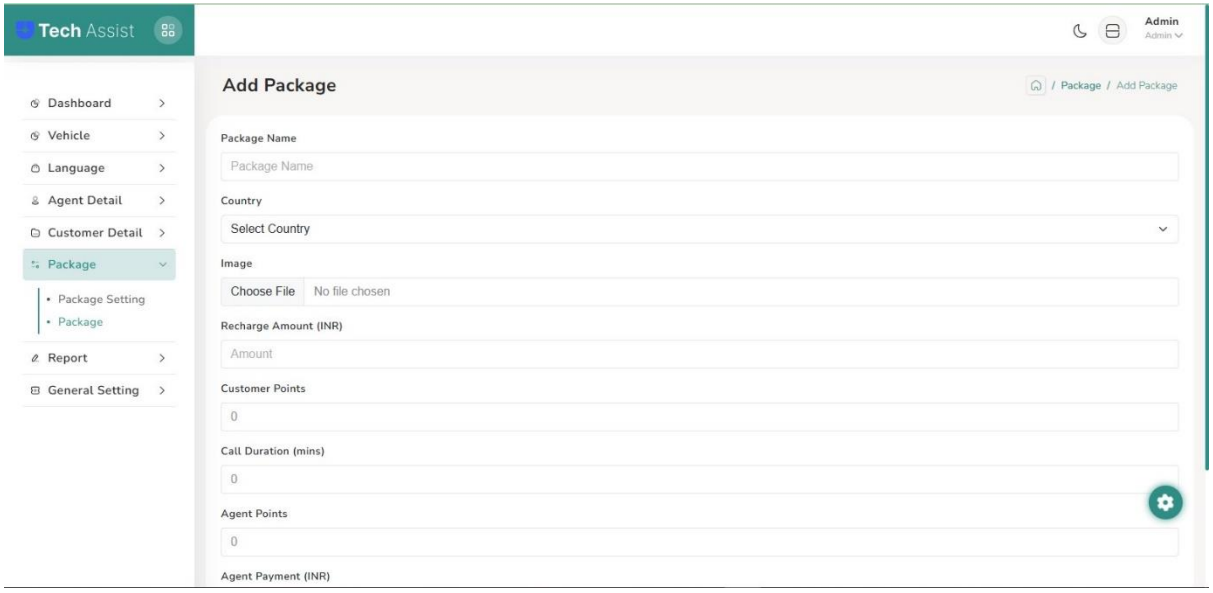
Package Screen

Description:

The Package module manages the creation, viewing, and editing of recharge packages. Each package is associated with a country, an image, and a recharge amount in INR. These screens provide a complete workflow for managing packages, making it easy for administrators to maintain accurate and effective recharge options for customers while aligning with the agent compensation structure

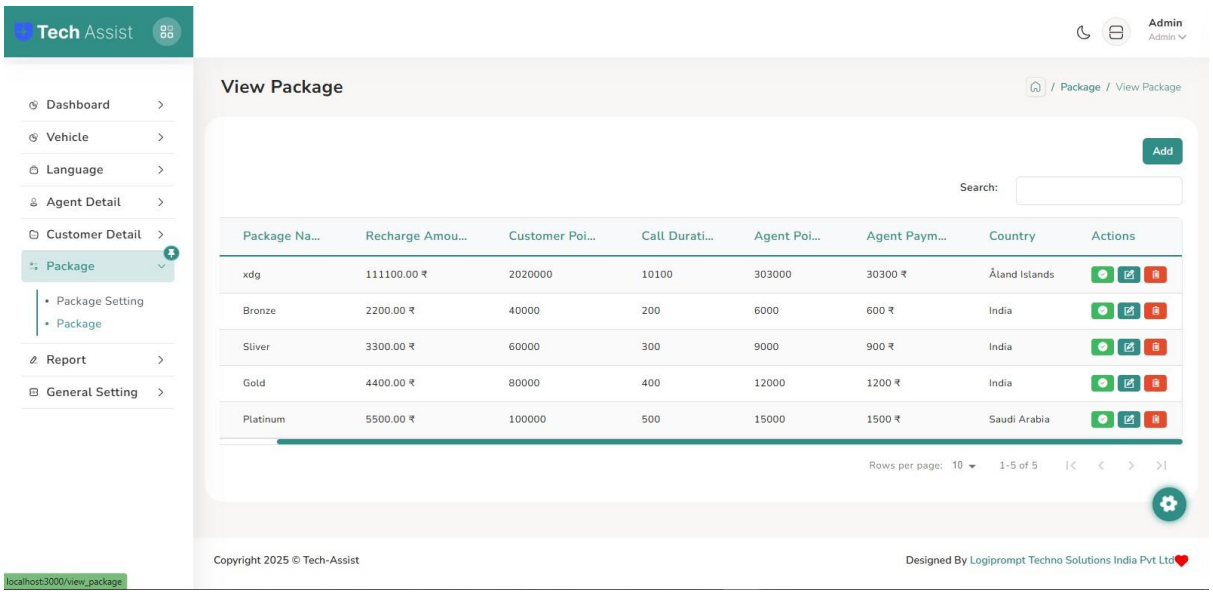
Add Package Screen:

On the Add Package screen, admins can configure a new package by entering the package name, selecting the relevant country, uploading an image, and specifying the recharge amount. Once the amount is entered, system-calculated fields such as customer points, call duration (in minutes), agent points, and agent payment (in INR) are automatically populated. These values are dynamically derived based on the current package payment settings and are shown as disabled fields, ensuring they remain consistent and uneditable.



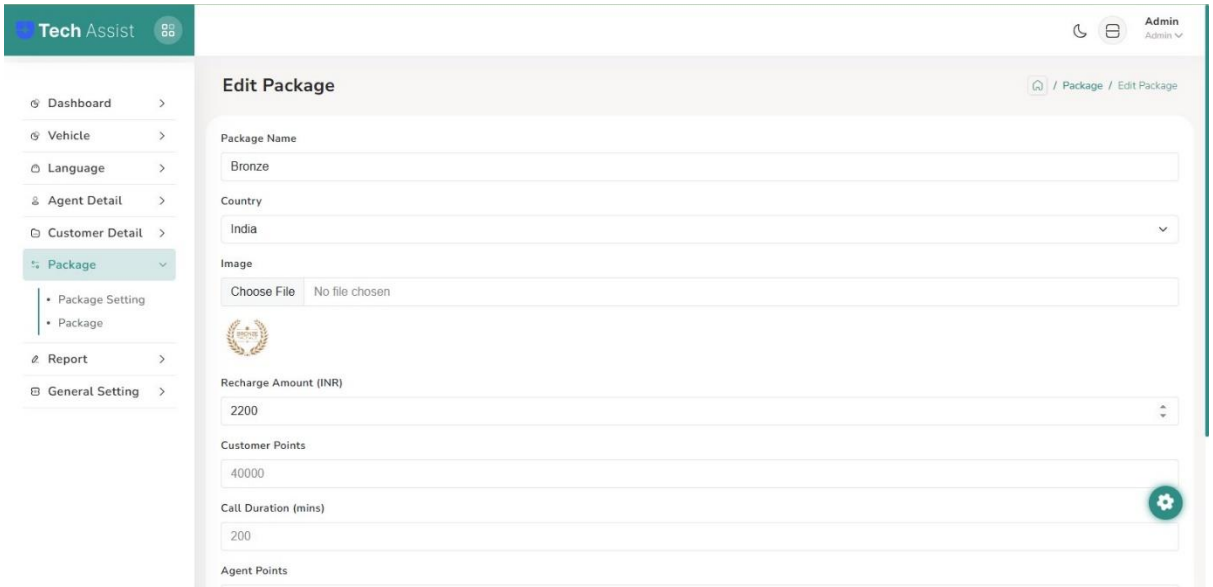
View Package Screen:

The View Package screen displays all configured packages along with complete details, including the calculated customer points, call duration, agent points, and agent payment. This view also offers options to edit or delete any package. The calculated fields provide admins with clarity on how each package translates into actual call time and agent incentives, helping in operational transparency and decision-making.



Edit Package Screen:

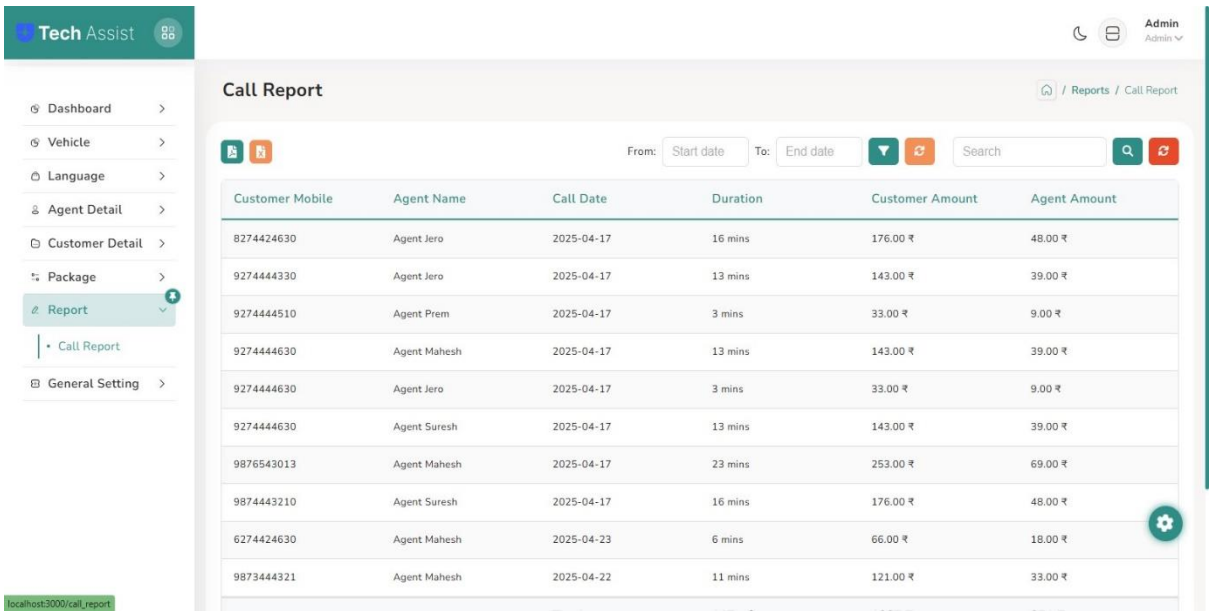
The Edit Package screen allows admins to update any existing package. When modifying the recharge amount, the dependent fields update automatically using the same logic as in the Add screen. Admins can also change the country, update the image, or rename the package as needed. The form maintains the same validation and logic flow to ensure consistency.



Call Report Screen

Description:

The Call Report Screen provides a comprehensive overview of all call transactions that have taken place within the system. For each call, the screen displays complete history including the duration, the amount spent by the customer during the call, and the corresponding amount that needs to be paid to the agent.



This ensures full transparency into communication costs and agent compensation on a per-call basis. To enhance usability, the screen includes a search box that allows users to quickly locate specific records by keyword. Additionally, date range filters—From Date and To Date—make it easy to narrow down call data within a specific timeframe. Users can download the entire dataset or the filtered results in either PDF or Excel format, depending on their reporting needs.

At the bottom of the screen, summary statistics are displayed, including the total call duration in minutes, total amount spent by customers, and total agent payment. These aggregated metrics offer a quick financial and operational snapshot, making the screen not only a detailed log but also a powerful reporting tool for admins and management teams.

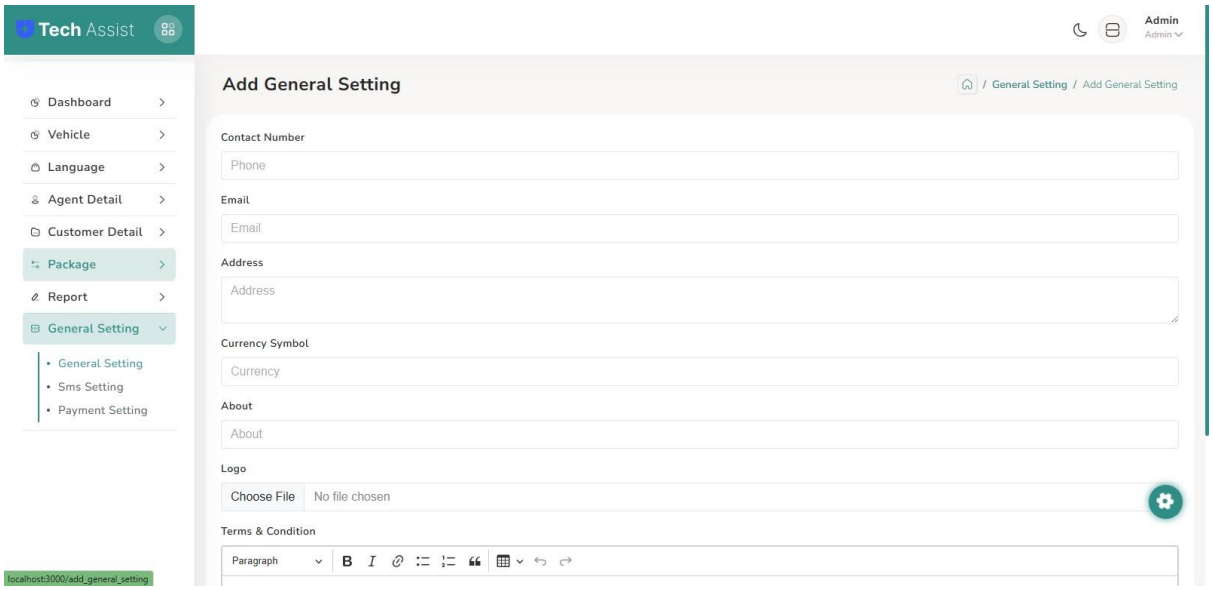
General Setting Screen

Description:

The General Setting screen allows administrators to configure and manage the core details that control the website's global behavior and display. It centralizes essential information such as contact details, email, and legal content, ensuring a consistent and professional appearance across the platform. This module plays a critical role in presenting and maintaining the website's identity and communication.

Add General Setting Screen:

The Add General Setting screen allows the admin to configure the website's foundational information for the first time. The admin can input the official contact phone number, email address, and the business address. A brief description about the organization is entered in the about section. The system also captures the preferred currency symbol used across the platform.

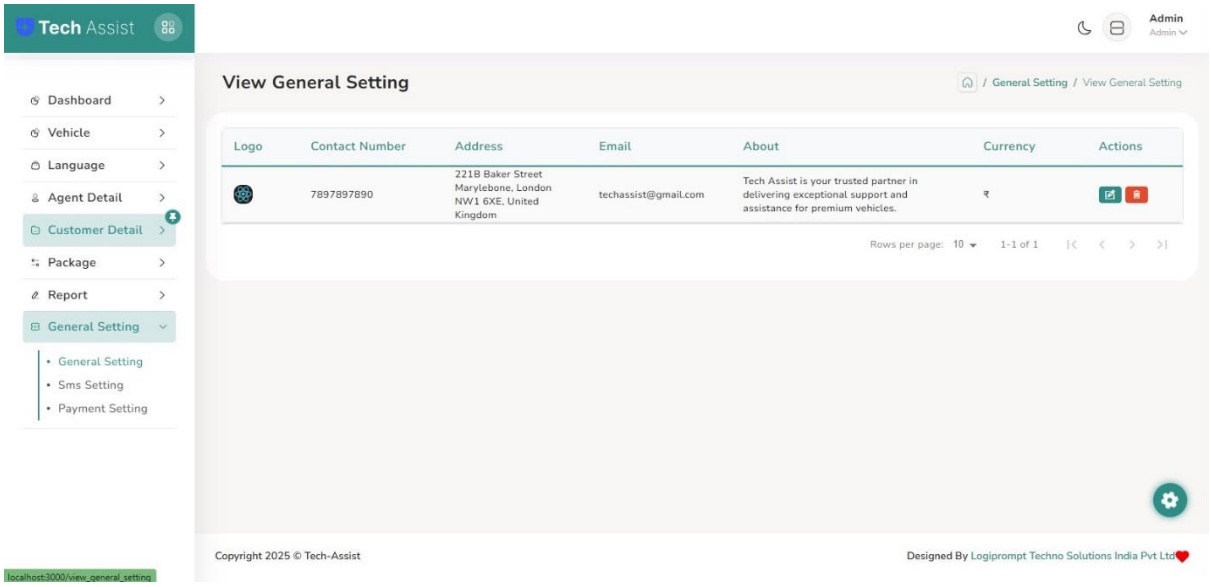


For branding purposes, a logo can be uploaded, which visually represents the business. SMTP password is added to configure outgoing email communication for notifications and system alerts. Additionally, the Terms and Conditions section uses a rich text editor (CKEditor),

providing flexibility to style and format the legal content. This screen is accessible only if no existing general setting data is available.

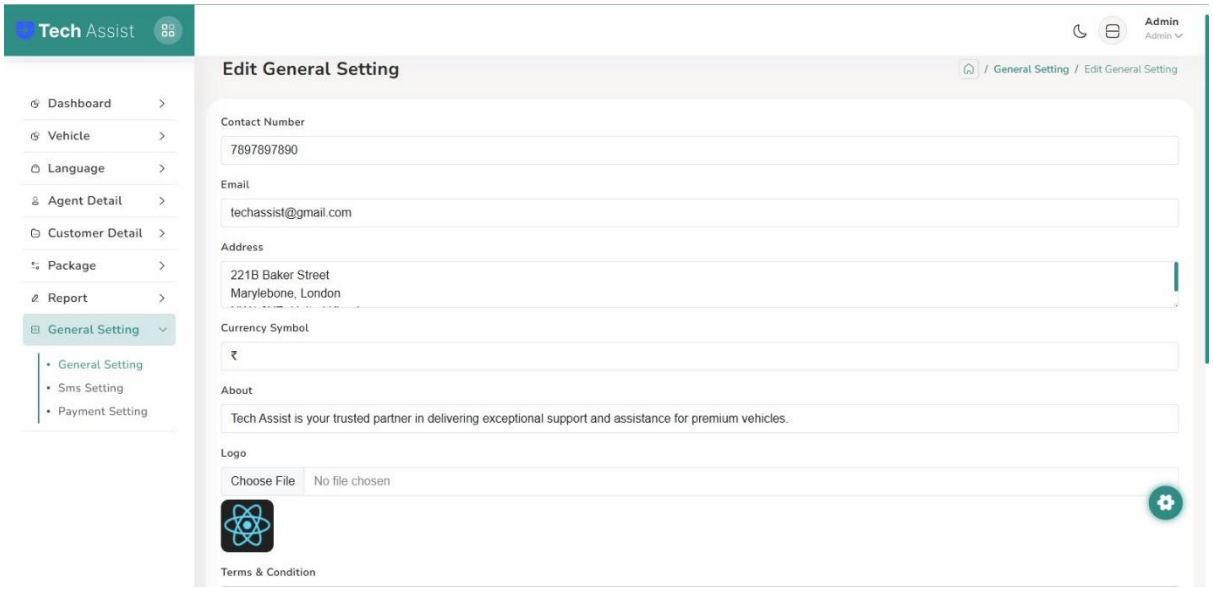
View General Setting Screen:

The View General Setting screen displays the existing general configuration details entered by the admin. It includes all the saved values such as the website's phone number, email, address, about information, selected currency, logo, and the formatted terms and conditions content.



The screen also allows the admin to delete the current general setting, and once it is deleted, the "Add" button becomes visible again. This ensures only one active general setting configuration exists at any given time. If a configuration is already present, the "Add" button remains hidden, reinforcing the rule of a single setting entry.

Edit General Setting Screen:



The Edit General Setting screen enables the admin to update or modify any of the existing general setting details. Admins can change the contact information, upload a new logo, update email settings, revise the "About" content, and make changes to the currency preference or terms and conditions using the CKEditor. This screen ensures ongoing flexibility in managing and maintaining up-to-date website configuration content.

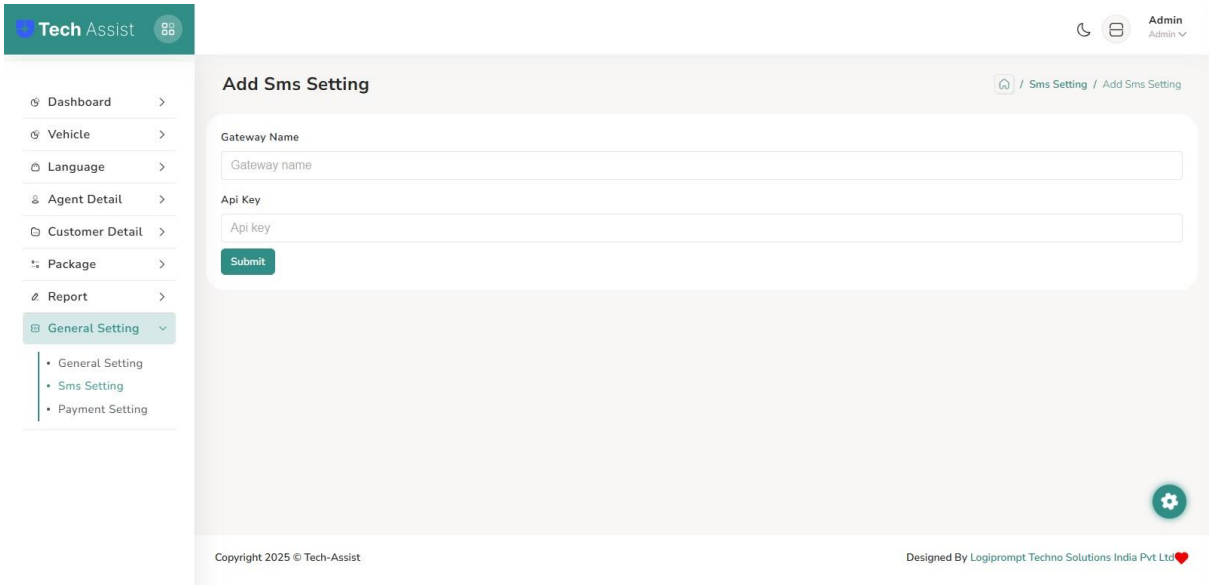
SMS Setting Screen

Description:

The SMS Setting screen is used to manage the configuration of SMS gateways within the system. It allows administrators to define and control the SMS sending service, set up API keys, and enable or disable different SMS gateways. The settings provide flexibility for managing multiple SMS configurations and ensure that the right gateway is active for communication with users.

Add SMS Setting Screen:

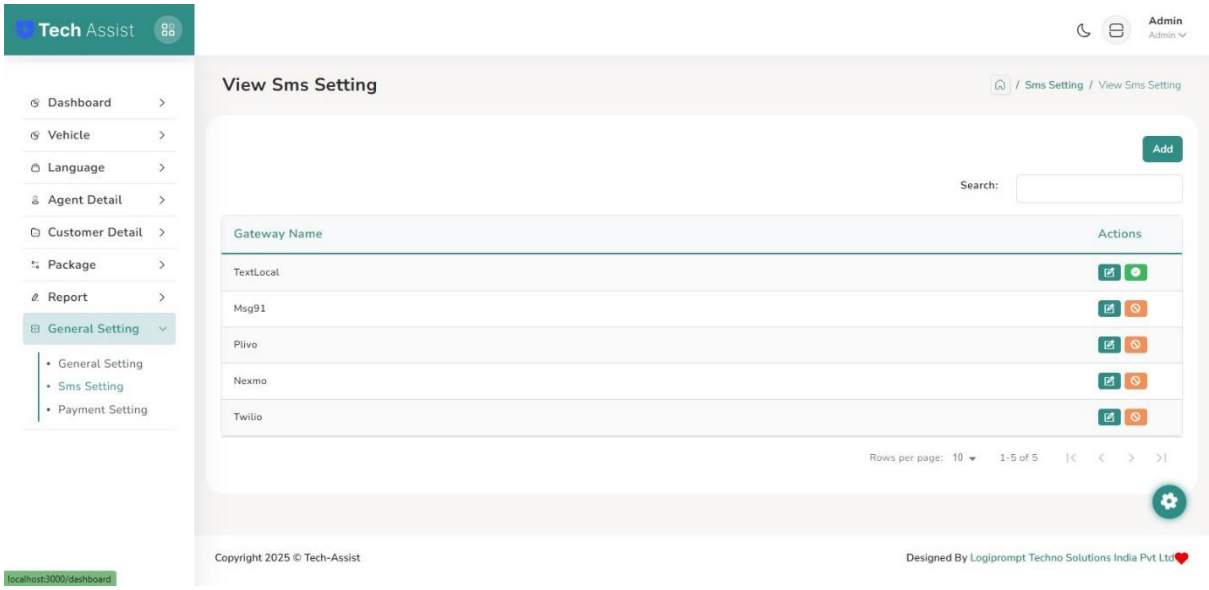
The Add SMS Setting screen allows administrators to configure a new SMS gateway by providing the necessary information. Admins can specify the Gateway Name to identify the service provider and input the API Key needed for authentication with the chosen SMS gateway. This screen is used to add a new SMS setting, enabling the admin to create new configurations as needed.



View SMS Setting Screen:

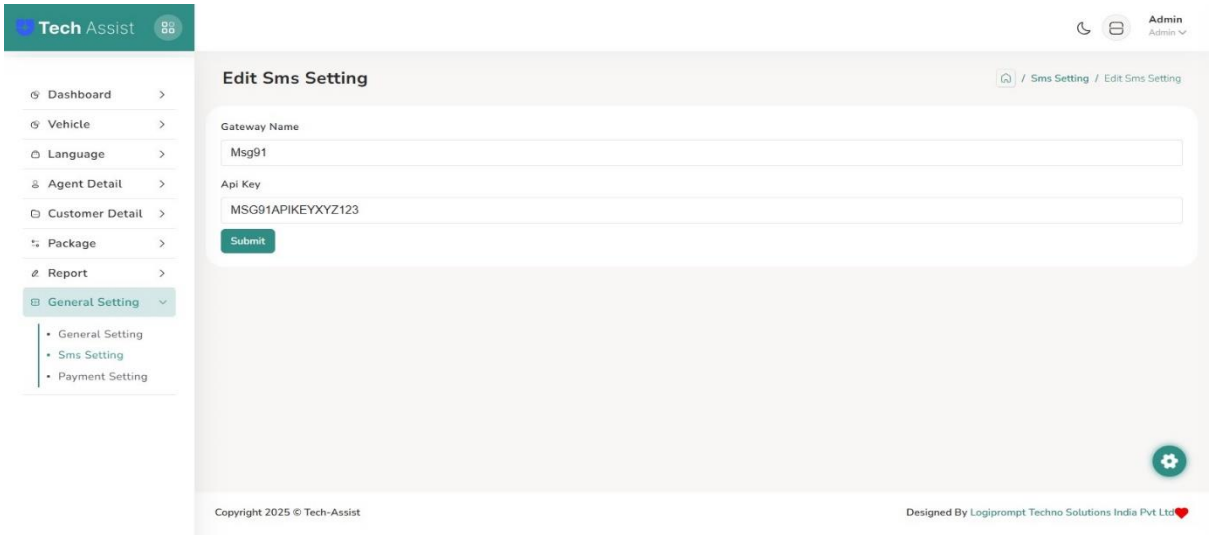
The View SMS Setting screen displays the existing SMS configuration and includes functionality to enable or disable the SMS setting. By default, the SMS setting is disabled. When enabled, all other SMS settings are automatically disabled, ensuring only one active SMS configuration at a time. This screen also allows admins to monitor the status of the SMS settings and control their activation. The Add button is always visible, giving the admin the

option to configure a new SMS gateway or update the existing one. Deleting or changing the SMS setting is not necessary unless a new configuration is to be set up.



Edit SMS Setting Screen:

The Edit SMS Setting screen enables admins to modify the existing SMS configuration. Admins can update the Gateway Name or API Key as needed, allowing for changes in the SMS service provider or key credentials. This screen is useful for making updates to the configuration without adding a completely new setting. Once updated, the changes can be saved and activated.



Payment Setting Screen

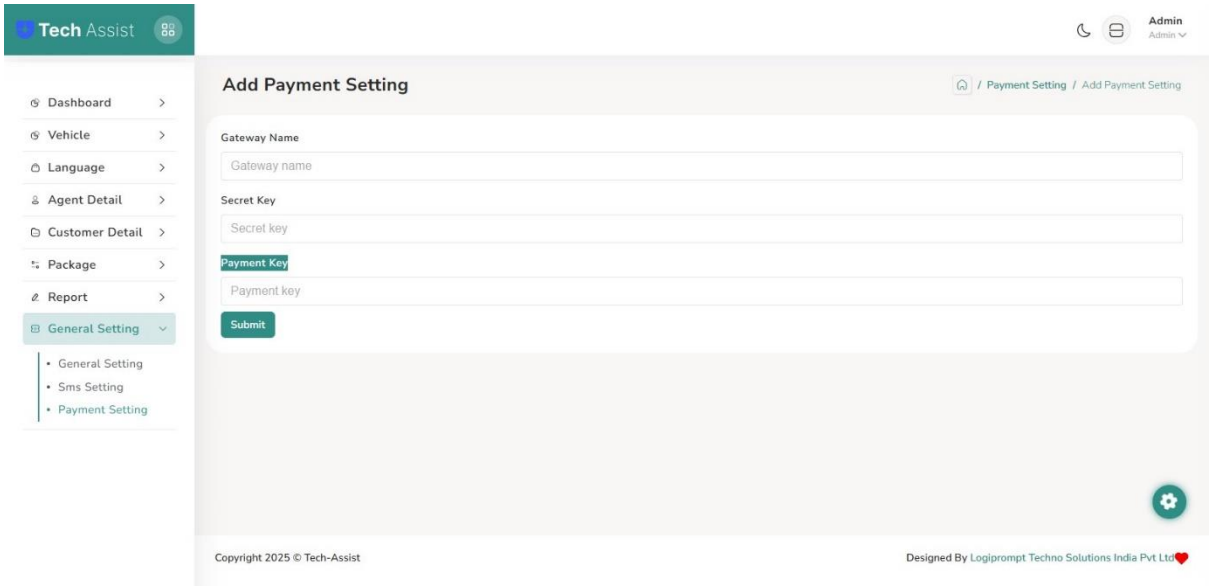
Description:

The Payment Setting screen is designed to manage configurations for various payment gateways used in the system. It allows administrators to securely integrate payment providers

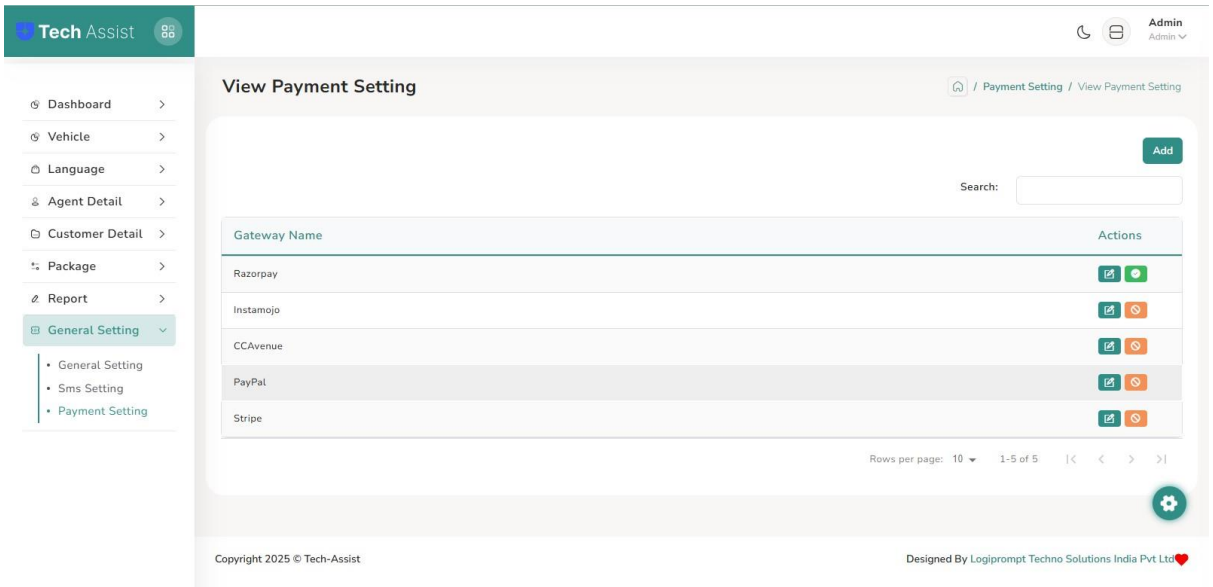
by specifying credentials such as gateway names and keys. Only one payment configuration can be active at a time, ensuring proper routing of payment transactions.

Add Payment Setting Screen:

The Add Payment Setting screen allows admins to set up a new payment gateway by entering the Gateway Name, Secret Key, and Payment Key. These fields are crucial for authenticating and enabling transactions with the payment provider. The "Add" button is always available, giving admins the flexibility to create new configurations as needed.



View Payment Setting Screen:

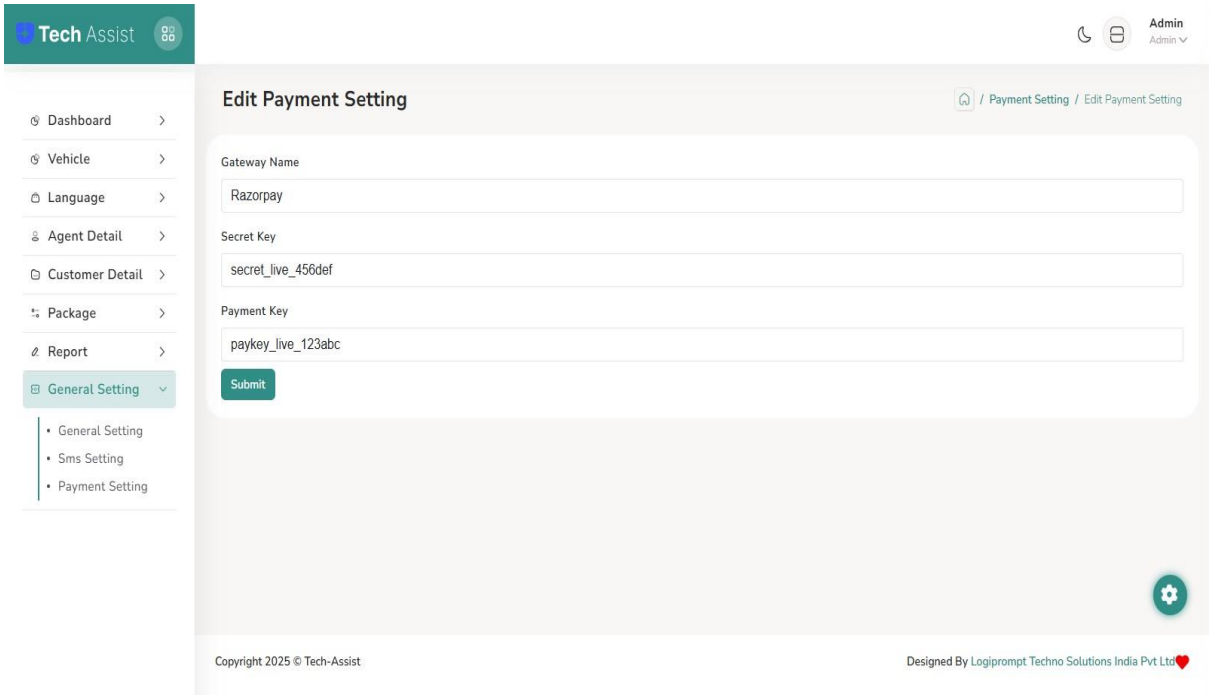


The View Payment Setting screen displays all existing payment gateway configurations. From this screen, admins can enable or disable specific payment settings. By default, payment settings are disabled. Enabling one payment gateway will automatically disable all others, ensuring only one active configuration is in use at any time. This view helps monitor and control which payment gateway is currently in operation. The Add button remains visible at all

times, allowing the admin to add new payment settings whenever required. Admins can also delete or update existing settings directly from this screen.

Edit Payment Setting Screen:

The Edit Payment Setting screen allows administrators to update details of an existing payment gateway. Changes can be made to the Gateway Name, Secret Key, or Payment Key to reflect updated credentials or switch to a different provider without removing the previous configuration. This screen helps maintain payment continuity with minimal disruption.



6. Tech Stack & Libraries

This project leverages the following libraries and tools to provide rich functionality, seamless UX, and efficient development:

🔧 Core Libraries

- **React Hook Form (react-hook-form):** Used for form handling and validation throughout the application.
- **React Router DOM (react-router-dom):** Enables navigation, route management, and access to location-based data.
- **Axios:** Handles HTTP requests and API communication.

📅 Date & Filters

- **React Datepicker (react-datepicker):** Used to filter data based on selected date ranges (e.g., in reports or call history).

📋 UI Components

- **React Data Table Component (react-data-table-component):** Used for rendering dynamic and responsive data tables.
- **React Multi Select Component (react-multi-select-component):** Enables multi-select dropdowns with a clean UI.
- **React Toastify (react-toastify**): Provides customizable toast notifications across the application.

✍ Text Editing

- **CKEditor 5:**
  - @ckeditor/ckeditor5-build-classic
  - @ckeditor/ckeditor5-react
    Used in forms where rich text input is required (e.g., Terms & Conditions in General Settings).

📈 Data Visualization

- **ApexCharts (apexcharts, react-apexcharts):** Used for rendering bar charts, pie charts, and other graphical data visualizations.

📤 File Export

- **JS PDF (jspdf, jspdf-autotable):** Used to export data tables and reports into downloadable PDF format.
- **SheetJS (xlsx):** Used to export data to Excel files (both filtered and full data).
